DETAILED ACTION

The Group and/or Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 2616.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with inventor William Grecia on 6/23/06.

Discussed reformatting of the claims to claim a method of encoding to the authored data structure, capturing the essence of applicant's invention.

The application has been amended as follows:

(A) Replace claims 1-4 with 1-4 below and cancel claims 5-7.

1. A method of encoding to an MPEG stream and encoding to CD media, the CD media compliant with White Book ISO 9660 2.0 format, having a table of contents, wherein upon playback preventing audio switching noise and popping, associated with auto repeat operations of playback CD devices, caused by not detecting the true end points associated with conventionally encoded CDs, during playback in Red Book compliant players,

the encoding method comprising the steps of:

- receiving and encoding a source of at least audio and video content data,
- authoring the conventional cue sheet by modifying the index to point at track one index 00, and
- adding ten seconds of WAV file data having 0 db or silence appended to the beginning of the encoded original WAV file and storing the appended WAV file on the CD media,

Art Unit: 2621

upon reproduction of the CD media is accomplished without interrupting play time of the CD media data track one and which is limited to 4 seconds of audio playback and reproduction of the CD media in DVD players allow playback control operations of all files contained in the data track one, without the utilization of the table of contents track above one, to do so.

2. The method of claim 1, wherein the source of audio and video content is one of an analog capture or an AVI file derived from a digital source, one of a Mini DV and Digital 8.

3. The method of claim 1, wherein the audio is 5.1 digital surround sound.

4. The method of claim 3, wherein the 5.1 digital surround sound is a DTS WAV format.

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach, disclose or fairly suggest the encoding method as claimed,

- authoring the conventional cue sheet by modifying the index to point at track one index 00, and
- adding ten seconds of WAV file data having 0 db or silence appended to the beginning of the encoded original WAV file and storing the appended WAV file on the CD media,

thereby, alleviating cited issues with audio related switching noise and popping issues of conventionally encoded discs based in the claimed CD standards and player types.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
